- 1) Forage values are suggested intakes based on good quality forage. The quality and digestibility of the forage is variable and dependent on the maturity of the plant at harvest. Horses older than 6 months should be fed at least 1% of the bodyweight as forage to maintain gut health.
- 2) When possible, have your forage analyzed to estimate quality and digestibility.
- 3) If the recommended minimum feeding rate is not met, either:
  - a. Add 1 lb of Gro'n Win® or Gro'n Win® Alfa for every 4 lbs of Cadence™ Ultra underfed.
  - b. Go to [www.buckeyenutrition.com](http://www.buckeyenutrition.com) or call 1 800 898 WINS for access to our equine nutritional experts at BUCKEYE® Nutrition.
- 4) Always maintain a clean, fresh water supply.
- 5) Make salt available free choice.
