- 1 Forage values are suggested intakes based on good quality forage. The quality and digestibility of the forage is variable and dependent on the maturity of the plant at harvest. Horses older than 6 months should be fed at least 1% of the body weight as forage to maintain gut health.
- 2 When possible, have your forage analyzed to estimate quality and digestibility.
- 3 If additional calories are needed do the following:
 - a. Add Ultimate Finish™ by BUCKEYE® Nutrition.
 - b. Incorporate the recommended amount of specially designed feeds by BUCKEYE® Nutrition to meet the unique energy demands of your horse.
 - c. Go to www.BuckeyeNutrition.com or call (800) 898-WINS for access to our equine nutritional experts at BUCKEYE® Nutrition.
- 4 Always maintain a clean, fresh water supply.
- 5 Make salt available free choice.
