

BALANCED NUTRIT

SOLUTIONS GUIDE

WHAT IS A BUCKEYE NUTRITIONAL UNIT (BNU)?

A BNU is a measurement to ensure your horse is getting the proper balance of vitamins, minerals and amino acids. The BNU conversion will ensure you are delivering the correct amount of essential nutrients just as if you were feeding GRO 'N WIN™ alone.

Example: Five pounds of SAFE 'N EASY[™] Pelleted will deliver the same amount of nutrients in one pound of GRO 'N WIN. The BNU conversion is 5 to 1.

BNIL CONVERSIONS*

Determine Your Horse's Daily BNUs:

- 1) Determine the age and life stage (growing, reproductive status or performance level) of your horse. This can be found along the bottom of the BNU.
- 2) Determine the current body weight of your horse using a scale or a weight tape.
- 3) Use the age and life stage along with the current body weight to plot the location on the BNU Chart with a dot for each horse. The corresponding number refers to the minimum number of BNUs necessary to feed per day.
- 4) If more calories are needed, gradually increase the amount of your BUCKEYE[™] Nutrition horse feed and/or add ULTIMATE FINISH[™] until the desired body condition is reached.
